

How to complain about reflected light from photovoltaic panels

Overview

Solar panel glare happens when sunlight bounces off panels, especially in the morning or evening when the sun is low. Changing the angle and direction of solar panels based on the season can. A primary concern is that solar panels will create intense, distracting reflections. Their purpose is to convert light into electricity, making high reflectivity an undesirable trait that would decrease. Solar panel reflection, also known as glare, can be a problem in some situations because it can cause discomfort or visual impairment for people, especially drivers or air traffic controllers. In addition, the reflections can also be harmful to surrounding wildlife or heat-sensitive equipment. In certain alignments, mirror-surface solar panels may direct and concentrate reflected sunlight (and intense heat and glare) toward neighboring properties. While these concerns have merit, proper regulation through a zoning ordinance can protect against these issues.

How to complain about reflected light from photovoltaic panels

Solar Panel Glare: Is it an Issue?

Solar panels generate power by absorbing light, so any light reflected is energy wasted. To avoid this waste, most solar panels have textured glass and anti-reflective coating that reduces ...
