

How to deal with glare from photovoltaic panels

Overview

Solar panel glare happens when sunlight bounces off panels, especially in the morning or evening when the sun is low. Changing the angle and direction of solar panels based on the season can. Modern solar panels are significantly less reflective than standard window glass or bodies of water. Textured glass surfaces can also be used to scatter incoming light.

How to deal with glare from photovoltaic panels

Relieving a Glaring Problem , American Solar Energy Society

Options for mitigating these effects range from anti-reflective coatings and glass texturing for PV modules to blinds and screens, in certain situations.
