

How to lay felt for photovoltaic panels

Overview

The roofing felt should be applied in layers that overlap. Start at the bottom of the roofline and work up so any water that gets through the roofing material will shed down the tar paper and will not go under it. As you work, the paper can be tacked down in the center so it won't. Can you safely install solar panels on a traditional felt roof?

The answer is not simple. I wrote this guide to give you the complete picture. My best idea so far is to mount with normal roof hooks well sealed with silicon where we screw them down through the. Can we spray foam and get panels installed or do I need to completely redo my roof with felt and new roof tiles?

Are you a tradesperson and able to answer this question?

cant understand why no felt would stop them fitting panels,may be your roof is in poor condition and they do not want to work on. If you take the time to properly prepare the roof, then laying the felt will be easy.
