

Introduction to photovoltaic panels

Overview

A solar panel is a device that converts sunlight into electricity by using multiple solar modules that consist of photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. Photovoltaic technology, often abbreviated as PV, represents a revolutionary method of harnessing solar energy and converting it into electricity. A single PV device is known as a cell. ☐ A 50W bulb connected directly to a 50Wp panel may not consume 50W, even in bright sun. In this basic introduction, we look at how this happens.

Introduction to photovoltaic panels

Solar Panels 101: A Basic Guide for Beginners

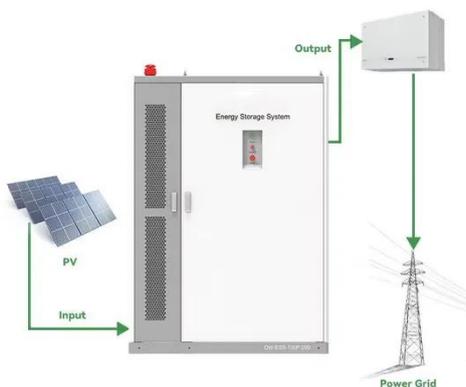

How do solar panels work? How many do you need, are they worth it and how long do they last? Get the answers in this quick introduction.
