

# Is it better to use high frequency or low frequency for EK inverter

## Overview

---

To sum it up: high frequency inverters are the "efficient, compact choice" for light loads and mobile setups, while low frequency inverters are the "rugged workhorses" for heavy loads and harsh conditions. Neither is inherently "better"—they're designed for different jobs. There are two main types of frequencies to be compared: low frequency vs high frequency inverters. High-frequency inverters use lightweight ferrite core transformers operating at 20-100 kHz, making them compact and efficient for electronics. Think about your power needs before you choose.
