

Is it cost-effective to buy solar panels to generate electricity

Overview

The pros of using solar panels include a lower carbon footprint, lower electric bills, potentially higher home value and tax credits. There are also significant changes to tax credits on the horizon that will greatly. A solar panel is a device that helps convert sunlight into electricity. Factors such as roof pitch, trees, and how much sun your region receives annually may affect how much power your system can produce. On average, a residential solar system costs from \$10,000 to as high as \$50,000 before incentives. It estimates the energy production and cost of energy of grid-connected PV energy systems for any address in the world.
