

# Is it necessary to reinforce photovoltaic panels later

## Overview

---

Most roofs can support solar panels with or without reinforcement. The key is proper assessment and preparation. Even if reinforcement is needed, the benefits of solar energy often outweigh the costs. Hevan provides insights and guidance on assessing your roof's strength. Photovoltaic revamping is a fundamental practice to extend the lifespan of solar plants, improve their performance, and ensure compliance with current standards. Here, we'll explore when roof reinforcement might be necessary and why it's important to ensure your roof is ready for the job. This can be due to wind uplift, thermal.

## Is it necessary to reinforce photovoltaic panels later

---

### Lithium battery parameters

Product capacity: 100Ah

Product size: 135\*197\*35mm

Product weight: 1.82kg

Product voltage: 3.2V

internal resistance: within 0.5

### Does My Roof Need Structural Reinforcements?

If they are required, you can hire a carpenter, framer, or skilled handy-person to do the structural upgrades. After we finalize the design for your solar array, we are happy to send the plans for the ...

## Strengthening Roofs Before Solar Installation

If the roof wasn't built to handle additional stress, it may require reinforcements before solar panel

installation. Roof deck condition is also critical.
