

# Is it possible to install photovoltaic panels at sea

## Overview

---

The good news is, with proper precautions and the right installation, you can absolutely put solar panels near the ocean and enjoy the benefits of clean, renewable energy. However, it's crucial to consider the unique environmental factors and take the necessary steps to ensure the longevity and. Marine solar energy—floating photovoltaic arrays deployed on ocean surfaces—represents a promising frontier in clean energy production, offering up to 20% higher efficiency than land-based systems due to the cooling effect of water. But how much energy will they generate?

For the first time, two energy researchers at Utrecht University have studied the energy yields of solar panels at the North Sea. 5km offshore Shandong photovoltaic array (operating in 7-meter depths) show progress, true deep-sea installations face unique.
