

# Is there any relationship between hail and photovoltaic panels

## Overview

---

Yes, but high-quality solar panels do not break down in hail storms because they are built to work in harsh weather conditions. They can withstand bad weather for many years, ensuring uninterrupted energy production. However, hail may damage solar panels. In areas that have experienced very large hail (greater than 1 ¾" or 44 mm diameter), however, hail has caused significant damage to PV modules. Some measures can be taken to limit damage to. Hail damage is now the dominant solar insurance risk: Accounting for 54% of all solar loss claims at an average of \$58. The verdict?

Most panels emerged unscathed, proving that today's solar technology can take a serious beating. Protecting this investment is paramount.

## Is there any relationship between hail and photovoltaic panels
