

# Israel Distributed solar and Energy Storage

## Overview

---

As regular readers of Energy-Storage. news will know, Israel's policy goal of reaching 30% renewable energy by 2030 – roughly equivalent to about 12GW of solar PV, likely to be the go-to renewable energy source in an almost-always sunny part of the world – has been modelled. As regular readers of Energy-Storage. (photo credit: NATI SHOHAT/FLASH90) In a country blessed with approximately 280 sunny days per year, the fact. A large-scale solar farm in Israel's southern Negev Desert region, completed in 2018. Connecting new PV facilities is a challenge, Eitan Parnass said. In an effort to drive the country to deploying more energy storage, the Israeli Ministry of Energy and Infrastructure has. The government has announced plans for Israel's first stand-alone energy-storage facility, consistent with the aims underpinning a revised draft climate bill (legally enshrining targets for carbon-free power generation). The growth trajectory remains notably high in Europe and Asia, while the pace in the Americas shows a moderation. Electrical energy is stored during times when electricity is pl storage may be economical.
