

# Ivy the magical tool for rooftop photovoltaic panels

## Overview

---

The quick summary: Solar Ivy, a nature-inspired photovoltaic system with leaf-shaped panels, produces 0.5 watts per leaf with a lifespan of 35 years, offering an aesthetic way to harvest solar energy in gardens and urban spaces. Back in 2005, siblings Samuel and Teresita Cochran created a concept of Sustainably Minded Interactive Technology (SMIT) while developing their thesis. 5 watts of power while. Having fast become recognized for the green consultancy they provide in conjunction with sustainable product development, SMIT has come out with a new solar energy system called Solar Ivy; leaf-like photovoltaic panels which use both the sun and the wind to generate electricity. Inspired by the ivy. Solar Ivy Update | Inhabitat - Green Design, Innovation, Architecture, Green Building × SIGN UP Already have an account?
