

Lightning protection and grounding specifications for rooftop photovoltaic panels

Overview

The lightning protection project for Solar Panels shall be designed in accordance with IEC 62305 National and International standards. In addition, adequate lightning protection measures are listed in the German VdS. Lightning protection systems (LPS) provide a protective zone to assure against direct strikes to PV systems by utilizing basic principles of air terminals, down conductors, equipotential bonding, separation distances and a low-impedance grounding electrode system. Single air terminals offer a cone. Lightning is a common cause of failures in photovoltaic (PV) and wind-electric systems. But most lightning damage is preventable. In this article, you will learn how to protect your solar power. Rooftop solar energy and rooftop PV plants are becoming widespread in our country; in these projects, we wanted to share with you our draft specification in accordance with IEC standards regarding how lightning protection, grounding, and LV surge arrester systems should be. You can download the system for the building(s) or structure(s). The design of this system is to be in strict accordance with this section of the specific prior to commencement of the installation. The collection area for PV plants are large.

Lightning protection and grounding specifications for rooftop photo

Microsoft Word

Lightning protection systems (LPS) provide a protective zone to assure against direct strikes to PV systems by utilizing basic principles of air terminals, down conductors, equipotential bonding, ...
