

# Lithium battery supporting BMS system

## Overview

---

Simply put, every lithium battery must include a Battery Management System. A Battery Management System (BMS) is the brain and safety layer of any lithium battery pack. It monitors cells, protects against abuse, balances differences between cells, estimates state of charge/health, and communicates with the rest of the device or vehicle. BMS is now required rather than optional in contemporary energy. It is a sophisticated electronic system that manages rechargeable batteries, such as lithium-ion batteries, by diligently monitoring their state, calculating secondary data, reporting that data, protecting the battery, controlling its environment, and balancing it. However, these powerful energy storage devices require sophisticated protection and management to operate safely and efficiently.

## Lithium battery supporting BMS system

---

### What Is a Lithium BMS and Why Is It Essential for Energy Storage

A lithium BMS is the primary intelligence of any lithium battery system, not merely a protective circuit. Without it, even the most sophisticated lithium cells are susceptible to imbalance, overheating, ...

### What is BMS on a Lithium Battery

## and Why Is It So Important

Each is essential to keeping your lithium batteries safe and performing at their best. 1. Monitoring -- Real-Time Health Check. The BMS performs continuous monitoring of several parameters: ...
