

Lithium chloride medical uses

Solar

Overview

Lithium was first used in the 19th century as a treatment for after scientists discovered that, at least in the laboratory, lithium could dissolve crystals isolated from the kidneys. The levels of lithium needed to dissolve urate in the body, however, were toxic. Because of prevalent theories linking excess uric acid to a range of disorders, including depressive and manic disorders, in Denmark and in New York City used lithium to treat mania from the 1870s onwards.
