

# Lithium ion iron phosphate battery

## Overview

---

A LiFePO<sub>4</sub> battery, short for Lithium Iron Phosphate battery, is a type of rechargeable lithium-ion battery that uses iron phosphate as the cathode material. This chemistry sets it apart from more common lithium-ion batteries such as lithium cobalt oxide (LiCoO<sub>2</sub>) or lithium manganese. Because of their low cost, high safety, low toxicity, long cycle life and other factors, LFP batteries are finding a number of roles in vehicle use, utility-scale stationary applications, and backup power. [7] LFP batteries are cobalt-free. Lithium ion phosphate battery.
