

Little Rabbit Solar Power Generation

Overview

This study presents a conceptual design for a novel agrivoltaic system based on pasture-fed rabbit farming and provides the technical, environmental, and economic analyses to demonstrate the viability of the concept. Jack Rabbit turbine -- a drop-in-the-creek turbine that can generate power from a stream with as little as 13 inches of water and no head. Output from the Jack Rabbit is a maximum of 100 Watts, so daily output averages 1.4 kilowatt-hours, depending on your site. Scientists have developed a new way to combine PV generation and rabbit farming. Michigan Technological University scientists have conducted a life-cycle assessment for a. Apex Clean Energy is an American renewable energy company based in Charlottesville, Virginia.

Little Rabbit Solar Power Generation

Microhydropower Systems

Jack Rabbit turbine -- a drop-in-the-creek turbine that can generate power from a stream with as little as 13 inches of water and no head. Output from the Jack Rabbit is a maximum of 100 Watts, so daily ...

LCA of Agrivoltaic Systems: Rabbit Production

The goal of this study is to assess the environmental impacts of a novel pasture-based agrivoltaic concept: co-farming rabbits and solar PV.

Frequently Asked Questions

Jackrabbit Solar will not raise local electricity prices. In fact, the cost of solar power has dropped by more than 89% since 2010 and is now one of the lowest-cost options for electricity generation.
