Well, three factors dominate: import dependence, fragmented supply chains, and limited financing options. Over 80% of photovoltaic systems here rely on Chinese or European imports. Cambodia's geographical location and climate conditions position it as a solar power hotspot with potential that surpasses many of its regional neighbours. Studies show that the country receives a daily solar irradiance of 5 kWh per square m and an average of eight hours of sunlight daily. In Cambodia, utility-scale solar can now be developed for under \$0. 06/kWh, making it cheaper than diesel or coal. The Ministry of Mines and Energy (MIME) and Electricité du Cambodge (EDC) have launched multiple solar tenders and pilot projects.
