Overview

The aim of this paper was to assess the socio-economic impact of access to solar mini-grids on the livelihoods of end-users in Zambia. The study employed a qualitative and quantitative research design, utilising control and experimental groups. Whilst half of the population is connected, the remaining half will require new energy solutions. Zambia currently relies on hydropower for 80% its electricity generation, but recent droughts. This White Paper examines the urgent need for effective regulatory reforms to scale minigrid investments in Zambia, a key component in achieving Sustainable Development Goal 7 (SDG7) by 2030. It highlights how Zambia's political will and recent legislative efforts have re-ignited investor interest. Lusaka, 26th November 2024 – Zambia is grappling with an energy crisis intensified by the adverse impacts of climate change, particularly a prolonged drought. A typical 100kW installation can power: In Q4 2024, a Chinese-Zambian joint venture deployed Africa's first blockchain-managed.
