

Nairobi battery safety

Overview

While DIY replacement is possible, it's not recommended for most drivers in Nairobi due to: Lack of proper tools and safety gear (batteries contain corrosive acid!). While DIY replacement is possible, it's not recommended for most drivers in Nairobi due to: Lack of proper tools and safety gear (batteries contain corrosive acid!). The continent's largest e-bike firm, Spiro, operates more than 1,200 battery charging and swap stations and has deployed about 60,000 electric motorcycles, according to its most recent public filing in late 2024. Njeri claims in his widely shared posts that some operators' remote lockout features. By the end you'll know smart storage, safe battery handling, and when to call pros, plus where to get reliable batteries locally. Let's get practical and keep it simple. With temperatures regularly exceeding 35°C, heavy traffic in Nairobi, and challenging road conditions across the country, proper battery care can. The Authority has there-fore developed the Electric Vehicle (EV) Charging and Battery Swapping Infrastructure Guidelines, 2023.
