

New Zealand Network Cabinet Constant Temperature and Humidity Type Promotion

Overview

High performance and reliability come in a compact package, for a wide range of temperature/humidity testing needs. Continuous improvement in the design of constant-temperature (and humidity) cabinets now with remote monitoring and control via PC Ethernet. A constant climate chamber, also known as a climate cabinet or climate chamber, is a unit used to simulate certain environmental conditions (temperature and relative humidity). The constant climate chambers are ideal for norm-compliant work according to ICH guidelines and work independently of the water supply. The humidity range is controlled by means of a capacitive humidity sensor and responsive. NHP have a range of climate control solutions designed to maintain optimum conditions for electrical and electronic equipment installed inside enclosures, protecting it from overheating and condensation.

New Zealand Network Cabinet Constant Temperature and Humidity

Constant Climate Cabinet , Environmental Test Chambers , Products

High performance and reliability come in a compact package, for a wide range of temperature/humidity testing needs. Continuous improvement in the design of constant-temperature (and humidity) ...
