

Onsite energy solars require solar energy

Overview

Onsite solar turns your facility into its own power source. Solar panels installed on rooftops, parking structures, or nearby land capture sunlight and convert it into electricity that feeds directly into your operations. For each kilowatt-hour (kWh) the onsite solar asset produces, a kWh of consumption will be offset for a buyer of renewable energy, or offtaker. These systems are often described as “behind the meter.” Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. But, as organizations look to scale operations and maximize the power output, barriers to success arise. Controlling your own energy supply means more predictable and reliable energy generation that lowers costs and environmental impact. Both community solar and onsite solar can allow your business to enjoy electricity savings and support the environment at the same time. Onsite energy encompasses a broad range of technologies that are.

Onsite energy solars require solar energy

Solar PV, Solar Ready, Battery Energy Storage System (BESS)

The Building Energy Efficiency Standards (Energy Code) include requirements for solar photovoltaic (PV) systems, solar-ready design, battery energy storage systems (BESS), and BESS-ready ...
