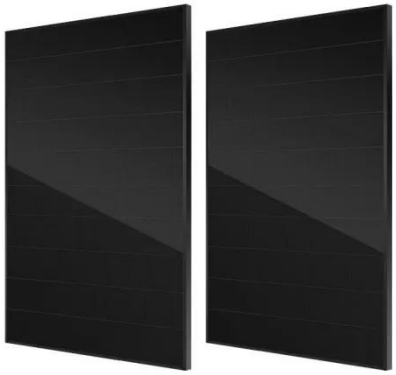
Outdoor base station cooling method

Overview

Therefore, achieving efficient heat dissipation without damaging the sealed structure is the core goal of base station thermal management design. The measured results showed that the system ran stably, the temperature inside the cabinet was controlled between 12 °C and 39 °C with no high temperature alarm, the compressor running time was significantly reduced, the.
Unattended base stations require an intelligent cooling system because of the strain they are exposed to. The sensitive telecom equipment is operating 24/7 with continuous load that generates heat. Heat can significantly degrade the performance and operating life of telecom cabinets, energy storage systems and back-up battery. [0003] At present, outdoor mobile base stations at home and abroad generally adopt the full-space cooling mode.

Outdoor base station cooling method



Cooling for Mobile Base Stations and Cell Towers

Unattended base stations require an intelligent cooling system because of the strain they are exposed to. The sensitive telecom equipment is operating 24/7 with continuous load that generates heat.
