

# Photovoltaic color steel tile bracket column spacing

## Overview

---

The spacing between guide rails must be set strictly in accordance with the size and stress requirements of PV modules, generally ranging from 1 to 2 meters, to ensure stable stress after the installation of PV modules. Glazed tile roofs: Hook spacing for glazed tile roofs is usually calculated based on the arrangement of the components and the length of the rails. A solid understanding of the various types of. The following will detail several common installation methods of PV brackets on color steel tile roofs, including L-foot and guide rail, double-headed bolt and guide rail, clamp and guide rail, mini guide rail, etc. The L-foot and guide rail installation method mainly consists of L-feet and guide. Professional tile roof installations employ several bracket configurations based on roof characteristics and project requirements: Traditional hook brackets attach directly to roof rafters, bypassing tile load-bearing limitations. It's an ideal solution for homeowners who want to reduce their energy bills and carbon foot rint without compromising on the ooks of their home. Sola odied Bitumen, TPO, Concrete etc. Roof must be cleaned with brush.
