

Photovoltaic energy storage station cost standard

Overview

As of 2025, prices range from \$0.86 per watt-hour (Wh) for utility-scale projects, while residential systems hover around \$1,000–\$1,500 per kWh [4] [6] [9]. But wait—why the wild variation?

Let's dive deeper. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity. Each year, the U.S. NREL's PV cost benchmarking work uses a bottom-up. The National Renewable Energy Laboratory (NREL) publishes benchmark reports that disaggregate photovoltaic (PV) and energy storage (battery) system installation costs to inform SETO's R&D investment decisions. This year, we introduce a new PV and storage cost modeling approach.

Photovoltaic energy storage station cost standard

U.S. Solar Photovoltaic System and Energy Storage Cost

This year, we introduce a new PV and storage cost modeling approach. The PV System Cost Model (PVSCM) was developed by SETO and NREL to make the cost benchmarks simpler and more ...

How much does a photovoltaic energy storage power station cost?

The initial cost of a photovoltaic energy storage power station depends on

various factors, including the scale of the project, location, and specific technology employed.
