

# Photovoltaic high-speed energy storage

## Overview

---

An energy storage system (ESS) with quick response having capability of power absorption or supply can improve stability of the microgrid by power levelling or bridging the gap between supply and demand. This paper proposes an islanded PV hybrid microgrid system (PVHMS) utilizing flywheel energy. ABSTRACT The use of hybrid energy storage systems (HESS) in renewable energy sources (RES) of photovoltaic (PV) power generation provides many advantages. These include increased balance between generation and demand, improvement in power quality, attening PV intermittence, frequency, and voltage. To help implement its commitment to provide 100 percent renewable power for operating the high-speed rail system, the California High-Speed Rail Authority (Authority) intends to build a series of photovoltaic (PV) solar systems and battery energy storage system (BESS) facilities in the Central.
