

# Photovoltaic panel batteries do not store electricity

## Overview

---

A common misconception is that solar panels can store electricity directly. To make solar energy available at night or during cloudy days, photovoltaic (PV) systems must be paired with reliable energy storage solutions, most. This leads to a common question: Can I install solar without in-home battery storage?

The short answer is yes: You can absolutely use solar panels without battery storage. If your home uses lots of power or faces outages, a strong battery system can help. But before buying one, you should know both the good and the bad sides. Here's what they cost, how they work and when they're worth it. The Independent Home Channel is powered by Octopus Energy.

### The Pros and Cons of Solar Batteries for Home Energy Storage in 2026

Solar panels only work when there is light. But your home needs power 24/7. A battery stores power during the day and gives it back when you need it, at night, on cloudy days, or during blackouts. If the ...
