

# Photovoltaic panel black screen

## Overview

---

A black screen on solar panels often indicates a lack of energy production due to several possible issues. This may occur due to physical obstructions like trees or buildings casting shadows. Faulty wiring connections can result in. If your solar charge controller display is not working, it is possible that the unit is not receiving power, or some internal components could be damaged. It's connected to a 24V battery and the grid. Are these IQ micros or M- or S-series micros?

Has this problem lasted for more than a few days?

A lot of time these issues do self-correct.
