

Photovoltaic panel carton appearance

Overview

A typical solar panel packaging consists of a cardboard box with the footprint of a pallet and houses between 26 to 36 panels in the box. The outer carton tube lid of the box is made from double strength cardboard. Includes all standard modules except those packaged for Europe, North America & Asian customers. Prepare. Eckpack is an intelligent and environmentally friendly returnable and reusable packaging solution for finished PV modules. Our plastic corners directly replace the cardboard cartons or wooden boxes still used by many module manufacturers and are a very simple and efficient solution: the corners fit. Solar panels have emerged as a pivotal technology in harnessing the sun's power as the demand for renewable energy continues to grow. Usually, separators are placed between each module, and extra protections are added to the four corners of each module stack. Our solar module pallets and collapsible bulk bins are engineered for real jobsite conditions—reducing waste, cutting breakage, and improving logistics from transport to installation.
