

Photovoltaic panel installation on stilts

Overview

Tilts work like little stilts for your solar panels; raising one side of the panel while keeping the opposite side lower. Solar panels on tilts are fastened to your roof in much the same manner as solar. Solar Stack is an innovative and damage-free solar panel mounting system that revolutionizes the way solar panels are installed on roofs. Our systems have high load capacities, require minimal maintenance, and are built to last. By making your own mounting system, you can save on hardware that typically makes up around 10% of a solar project's cost.
