

Photovoltaic panel regular inspection report

Overview

Quick Answer: Solar panels require three types of inspections: a mandatory final inspection for new installations before activation, annual DIY self-inspections, and professional inspections every two years. Key items to check include panel surface condition, electrical connections, mounting. Solar panel inspections are the shield against crippling callbacks. They're also the key to unlocking peak system performance for your clients. Providing an online list of inspection requirements will reduce informational barriers between inspectors and solar installers, helping to ensure that all items in the inspection. This document has two sections. SECTION 1 - Field Inspection Guide: The purpose of this section is to give the field inspector a single-page reminder of the most important items in a field inspection.
