

Photovoltaic panels connected to electric heating rods

Overview

Yes, it is possible to connect a solar panel directly to a heater under certain conditions. However, there are important factors like voltage, power, and type of heater that need to be addressed to create a safe, effective system. Lets say also that you have grid power but cant backfeed or have already maxed out your backfeed. Immersion heaters can be quickly and easily integrated into existing boilers and buffer storage tanks. In this article, you'll learn how the system works, how much it costs and when it's worth it.
