

# Photovoltaic panels generate electricity too fast

## Overview

---

If a solar panel produces too much power, it can overload the electrical system, causing damage. High wattage can affect battery storage, making it hard to store energy safely. This article will explore whether too much watts from a solar panel can cause problems. We will look at different aspects of solar panel wattage, potential risks, efficiency issues, and how to. Solar panels capture a varying amount of electricity each day, depending on weather conditions. Well-sized solar arrays will often overproduce energy during sunnier months, but this energy doesn't go to waste.

## Photovoltaic panels generate electricity too fast

---

### What Happens If Your Solar Panel Makes To Much Power

When generating solar energy, it is possible that your solar panels produce more electricity than allowed by your net metering agreement. In such cases, the excess electricity might ...
