

Photovoltaic panels installed on roof gutters

Overview

Installing gutters after solar panels risks accidental damage to the panels, mounting hardware, or electrical connections. Solar, or photovoltaic (PV) panels as they're referred to in NFPA 1, Fire Code, are becoming more and more common on one- and two-family dwelling and townhouse roofs. Since the 2016 edition of NFPA 1, access pathways have been required on roofs to facilitate fire service access as well as egress. Solar panels are a popular choice for homeowners looking to reduce their carbon footprint and save on energy costs. If that work isn't done carefully, your gutters can pay the price. Gutter protection and roof maintenance should both be key focuses before considering solar options.
