

Photovoltaic panels installed on the chicken farm roof

Overview

Learn how to safely install solar panels on your poultry house roof to cut energy costs and boost your bottom line. Energy is a significant expense for poultry growers. From automated feed lines to lighting to ventilation and climate control, so much of your operation is dependent on electricity. Suppose you have a 5% annual profit margin. National Poultry Technology Center The ever-evolving modern poultry house has gained numerous energy efficiencies over the last few years. This electricity can power a range of items, such as DC or AC fans and lights, and a deep-cycle battery can store excess solar energy. The best panel position for maximum efficiency depends on factors. Installing solar panels on your chicken coop can not only help reduce your carbon footprint but also provide a sustainable source of power for essential systems like lights, ventilation, and even egg incubators.
