

Photovoltaic solar panel testing standards

Overview

The International Electrotechnical Commission (IEC) has created two main standards for solar panels: In Europe, these standards are called EN IEC 61215 and EN IEC 61730. For buyers, project managers, and investors, understanding IEC 61215 and IEC 61730 certification standards helps you make smart choices that save money in the long run. These standards include compliance with industry regulations such as UL. Solar panels sold in the United States need to comply with various standards and regulations, including requirements that cover labeling, documentation, and testing. Photovoltaic Solar Panels have a long lifespan: properly built and installed equipment should generate usable electricity for more than 25 years.
