

# Rabat inverter cabinet high temperature resistant type

## Overview

---

Stainless steel has excellent mechanical properties and can withstand high temperatures without significant deformation. For the outer shell, we use corrosion - resistant and heat - stable metals, such as stainless steel. For commercial setups, consider modular designs that support. We design and manufacture electrical cabinets for areas with extreme temperature conditions, both in high temperature +250°C and in low temperature -60°C; ours cabinets are prepared for a high humidity concentration or a very dry environment, with the guarantee that the electrical components will. ate inverters, transformers, control equipment and fuses or in different sizes and colours to suit local circumstances, allowing you to meet the requirements of the architect and th impressively durable frames, made of torsion-resistant aluminium profi res are well defended against deliberate. Solar Inverter Cabinets are manufactured using best grade material and advanced technology.
