

Ranking of solar power generation in China

Overview

Photovoltaic research in China began in 1958 with the development of China's first piece of . Research continued with the development of solar cells for space satellites in 1968. The Institute of Semiconductors of the led this research for a year, stopping after batteries failed to operate. Other research institutions continued the development and research of sola.

Ranking of solar power generation in China

H1 2025: China installs more solar than rest of the world combined

China is leading this surge by a wide margin. In the first half of 2025, the country installed more than twice as much solar capacity as the rest of the world combined, accounting for 67% of
