

Reconstructed wooden photovoltaic panel support

Overview

In this first video for this project, I build a short term ground mount rack for my solar panels out of wood. I spent a lot of time thinking about this and designing it in my head to meet my very unique needs. The PV panels are mounted to commercially available aluminum rails made for easy mounting of PV panels. The rails are supplied by companies like IronRidge or SunCommon—a B Corp-certified company offering solar and other clean-energy solutions throughout Vermont and New York's Hudson Valley region—debuted its timber-framed solar canopy in 2017. Solar canopies, which are structures topped with solar panels, can be used as carports (and EV-charging). These sustainable timber structures can make solar energy and renewable EV charging more accessible and reduce the carbon footprint of businesses and homes.
