

Renewable and clean energy supplies business

Overview

For many energy providers and utility companies, shifting from fossil fuels to renewable sources is a business necessity and a societal imperative. Companies seeking to invest in clean power can increase their impact and lower costs by taking a broader view—instead of focusing narrowly on their own energy use. Businesses increasingly want to buy clean electricity—especially as the fast expansion of data centers powering artificial intelligence. Since the IRA's enactment, manufacturing has emerged as the fastest-growing segment of investment in clean energy technologies. We assess the state of supply chains for solar, wind, batteries, and electric vehicles. Since the US enacted the Inflation Reduction Act (IRA), manufacturing has emerged. That's why at AES we have a diversified approach to support the exponential growth of AI, electrification, and reindustrialization by delivering reliable energy smarter, faster, and at scale. We believe in developing clean energy projects that provide positive benefits for all.
