

Rooftop and ground mounted solar panels

Overview

Ground-mounted solar panels are free-standing and able to be installed anywhere on your property — including the front, side, or backyard — whereas rooftop-mounted panels must be attached to your roof. Both options have unique benefits and make sense for different households. The most obvious difference between ground-mounted and roof-mounted solar panels is the installation location. They're usually more expensive than roof-mounted systems, but can maximize your renewable energy production. Ground-mounted solar panels and roof solar panels both harness sunlight for energy but have different advantages. Ground-mounted panels can be placed and angled for maximum sun exposure, are easier to clean and maintain, but can take up considerable space.
