

# Rooftop separated photovoltaic panels

## Overview

---

This is a type of solar PV system that involves the generation of electricity using solar panels mounted on the rooftops of residential, commercial or industrial buildings or structures. Smart monitoring systems provide real-time performance tracking. Solar, or photovoltaic (PV) panels as they're referred to in NFPA 1, Fire Code, are becoming more and more common on one- and two-family dwelling and townhouse roofs. Since the 2016 edition of NFPA 1, access pathways have been required on roofs to facilitate fire service access as well as egress. Building-integrated photovoltaics is a set of emerging solar energy applications that replace conventional building materials with solar energy generating materials in the structure, like the roof, skylights, balustrades, awnings, facades, or windows. Lake Area High School south-facing façade in. The process of designing and planning the positioning of solar panels on a rooftop is called solar rooftop design. The goal of solar rooftop design is to maximize energy production while taking local construction laws and regulations into consideration.
