

Server racks for communication equipment rooms with constant temperature and humidity

Overview

An air conditioned server rack is a cooling solution designed to maintain optimal temperatures in data centers by controlling airflow and humidity around servers, preventing overheating. According to the American Society of Heating, Refrigeration, and Air-Conditioning Engineers (ASHRAE), server rooms should be kept at 59 degrees F to 89. They should also have a relative humidity of 20 percent to 80 percent. However, many experts suggest a range of 64. 4 degrees F and. The Cruxial-Cool-42u Air Conditioned Server Rack is a 19" wide, 42u server rack featuring a rackmount 9k BTU air conditioning unit with remote monitoring and management. Cool your hot equipment in our most popular Cruxial Server Rack. Server rooms require a constant source of cool air to combat the heat generated by densely populated server racks.
