

Sierra leone energy transition

Overview

The plan marks a significant step in achieving universal energy access and economic development in Sierra Leone with a target of 100% electrification by 2040, while also establishing the country's environmental stewardship. His Excellency Julius Maada Bio, the President of Sierra Leone, launched the Energy Transition and Green Growth Plan on 4 th November 2024 at the Climate Resilience and Energy Transition Dialogue in Sierra Leone. This Compact presents a strategic framework to accelerate access to affordable, reliable, and sustainable energy, targeting 78% national electricity access by 2030 while enabling inclusive economic growth and access to electricity. Clean cooking access is even more critical. President Dr. The ongoing energy crisis, coupled with the unreliable electricity supply from the national grid, underscores the critical need to expand access to renewable energy for economic growth and development. The country's heavy reliance on fossil fuels has intensified the. The plan which was unveiled at the first ever national dialogue on just energy transition held late last month envisages a country that produces enough energy to meet its needs and to export the excess to neighbouring countries.
