

# Single glass is better than double glass for photovoltaic panels

## Overview

---

Single glass panels are often slightly more efficient under ideal conditions due to their lighter weight, which allows for thinner layers between the glass and cells. However, like any superhero, they have weaknesses. The plastic backsheet (think of it as their kryptonite) can degrade over time, potentially affecting performance. Single. Choosing between single glass vs double glass solar panels depends on your location, budget, and project goals. The concurrent trend towards higher power output and larger module sizes has introduced new concerns that demand.

## Single glass is better than double glass for photovoltaic panels
