

Solar glass is heated

IP65/IP55 OUTDOOR CABINET

WATERPROOF OUTDOOR CABINET

42U/27U

OUTDOOR BATTERY CABINET

Overview

Tempering: Glass is heat-treated by heating annealed glass to $\sim 620^{\circ}\text{C}$ and then rapidly cooling by airflow. Solar control glass is a type of glass that is designed to minimize the amount of heat that enters a building through its windows while still allowing natural light to enter. This innovative technology has gained popularity in recent years as a. Glass manages solar heat radiation by three mechanisms: reflectance, transmittance and absorptance.

Absorptance - the proportion of solar radiation absorbed by the glass. This helps less heat get into buildings.

Solar glass is heated

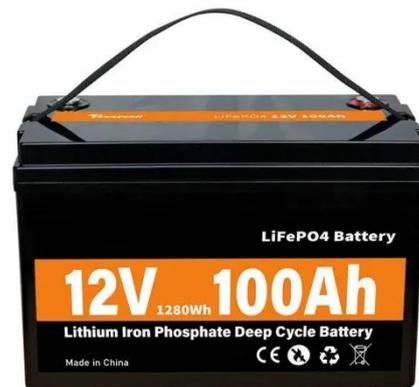

Solar control glass , SunGuard glass products , Guardian Glass

The special properties of solar control glass let natural daylight in, while reflecting a high proportion of the sun's heat. The indoor space remains bright but cooler compared to uncoated glass.

What is solar control glass? This is what the experts say , Ideal Home

'Solar control glass features an advanced, microscopically thin coating on the inner face of the outer pane of glass that makes up a double or triple glazed unit,' explains Charlotte Gilbert from ...

[Learn More](#)

Solar control

In hot conditions or for building with high internal loads, solar control glass is used to minimise solar heat gain. It allows sunlight to pass through a window or façade while radiating and reflecting away a large ...
