## Overview

---

Wondering what size solar inverter do I need for your solar system?

This guide walks you through calculating inverter size based on panel capacity, power usage, and safety margins. A properly sized solar inverter typically lasts 10-15 years, though premium or microinverter units can reach 20-25 years with good maintenance. Think of inverter sizing like choosing the right-sized engine for your car. Too small, and you'll struggle on hills. 0 or SMC shall be used with Solar Inverter. The following specifications reflect Tesla Solar Inverter with Site Controller (Tesla P/N 1538000-45-y). For specifications on Tesla Solar Inverter without Site Controller, see Tesla Solar. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. In this guide, you'll learn what size solar inverter you need, how to size an inverter for solar systems step by step, how panel output affects inverter capacity and also how many inverters per solar panel make sense for different setups without the headache. Enter your solar array capacity and load requirements to determine optimal inverter size.  $\text{Inverter Size} = \text{MAX} (\text{Array Capacity} \times 1.$
