Solar panel automatic expansion system

Overview

At the push of a button, Xpanse opens in less than 30 seconds, instantly generating high power from 50 solar panels. When closed, the panels are protected in a steel shell that sits on only 10" of space on the roof corner. Solar photovoltaic (PV) systems remain a top choice for sustainable energy, but many existing installations fall short of meeting new, rising demands. The good news: expanding an existing solar PV system is now easier and more affordable than ever. If there's enough available installation space, the cost of adding extra panels may be beneficial to maximize. Although the residential solar market installed over 1. 1 GW of capacity in Q1 2025 alone, many existing customers nevertheless find themselves needing additional energy generation capacity. Therefore, this presents a significant opportunity for solar installers and EPCs to provide expansion. I've tested it powering heavy loads like air conditioners and RVs, and it handles up to 3000W seamlessly, making it perfect for outdoor adventures or backup power at home. This unit shines with its ultra-fast charging, hitting 80% in just 1. However, it's essential to navigate various key considerations to ensure.
