

Solar photovoltaic panels cannot be damaged

Overview

Solar panels are designed to be durable and weather-resistant, but they are not indestructible. Cracks, chips, or fractures can occur due to various reasons, such as hail storms, falling debris, or improper handling during installation or maintenance. However, accidents happen, and one common concern is whether a shattered solar panel can still function. This question is crucial for anyone who relies on solar energy, as it directly impacts energy production, repair costs, and overall system efficiency. They're also the most vulnerable part when dealing with nature's elements.

Solar photovoltaic panels cannot be damaged

Broken Or Damaged Solar Panels: Causes And What To Do

If you have solar panels and believe one may be broken or damaged, it's important to know the proper steps to take so you can fix the issue as quickly possible.
