

Solar power generation in the gate area

Overview

It is planned to have up to 1.2 gigawatts (GW) of generating capacity via nearly 4 million solar panels and up to 7,200 megawatt hours (MWh) of paired battery energy storage. On October 6, the Oregon Energy Facility Siting Council (EFSC) granted final approval for the construction of the Sunstone Solar Project, the largest proposed solar-plus-storage facility in the United States. The Sunstone Solar project is expected to provide 1,200 megawatts of clean energy to the Pacific Northwest, with the first. This means that solar and storage developer Pine Gate Renewables can move forward with its plans to build its 2.5 miles of 230-kilovolt (kV) overhead transmission lines. File photo: Farm and Energy Initiative By Kendra Chamberlain. Permission was the final step in the state's assessment and public involvement process, authorizing project owner Pine Gate Renewables. Dec.
