

Spiral ground pile photovoltaic support

Overview

The spiral ground pile foundation is a form of photovoltaic support foundation that has become increasingly widely used in recent years. The blades can be large or small, continuous or intermittent. Yuhao PV ground piles, relying on core technologies of hot-dip galvanizing and spiral strong support, have become the preferred foundation solution for major PV projects, creating a reliable "root" for green energy development. The anti-rust advantage of hot-dip galvanizing technology is the first. In photovoltaic project foundation engineering, spiral ground piles, with their advantages of "no excavation required, quick installation, and strong load-bearing capacity," have become a key alternative to traditional concrete foundations. Its essence is galvanized steel pipe pile with screw blade welded.

Spiral ground pile photovoltaic support

Types of Ground PV Systems with Different Foundations

The spiral ground pile foundation is a form of photovoltaic support foundation that has become increasingly widely used in recent years. The spiral ground pile is made of hot-dip
